

Tilgin develops and delivers next generation systems and software for the digitally connected home.

Using Tilgin's high performance and multi functional home gateways, software and remote management solutions, broadband operators can substantially reduce their operating expenses, introduce new services faster and vastly improve the consumer experience.

Tilgin's unique management solution lets an operator remotely handle device startup, maintenance and troubleshooting. In the same remote way, new services for triple play and beyond can be introduced instantly and on an individual basis. This takes away the need to distribute new boxes to consumers in order to handle new services and typically doubles the economical life span of the home gateway. It also substantially reduces the work load on an operator's support function.

Tilgin's products for fiber, Ethernet and VDSL2 can handle all types of current and coming services, and share the same software, further simplifying operation and maintenance for the operator. So is the easy integration with their operational and business support systems and the fact that millions of home gateways can be managed in the same system

With more than 30 forward thinking customers and a substantial market share in Europe and the Middle East, Tilgin has a broad international reach and a strong client base.

Headquartered in Kista, Sweden, Tilgin was founded in 1997 and is listed at NASDAQ OMX Nordic Exchange in Stockholm.
